Professional Summary

Cyber Security student at GIKI specializing in cryptographic systems and AI engineering. Backed by a #1 Pakistan ranking on HackerRank's AI Leaderboard, with a proven track record of exploring post-quantum cryptography threat models, building zero-trust architectures, and developing ML forensic tools. Actively seeking remote contract roles or Summer 2026 internships in cyber operations and AI security.

Education

Ghulam Ishaq Khan Institute of Engineering Sciences and Technology (GIKI)

Topi, Pakistan

BSc in Cyber Security

Sep 2023 - June 2027 (Expected)

Technical Projects

CryptoCore: Post-Quantum Threat Simulator

April 2026 Python, C++, Shor's Algorithm

- Simulated "Harvest Now, Decrypt Later" threat models, using Shor's Algorithm to mathematically demonstrate ECC's higher quantum vulnerability compared to classical RSA.

ContextTrace: AI Quality Evaluator (LLM-as-a-Judge)

March 2026 LangChain, Gemini API, Claude API

- Built an automated Side-by-Side framework to benchmark RAG accuracy and safety, quantifiably reducing hallucination rates in production LLM outputs.

VERITAS: ML Forensic Intelligence and Log Analyzer

Oct 2025 Python, Scikit-learn, Random Forest, Pandas

- Developed a forensic automation tool reducing log review time by 70% using a tuned Random Forest model to achieve 96% accuracy in alibi verification.

Enigma: Zero-Trust Secure Vault Application

May 2025 Python, Cryptography, SQL, Active Defense

- Engineered a zero-trust secure vault utilizing client-side encryption and honey-links for active defense against unauthorized access.

Technical Skills

Security	Splunk (SIEM), Wireshark, Snort (IDS), Nmap, Burp Suite, Scapy, Kali Linux
AI/ML	RLHF, RAG Pipelines, LangChain, HuggingFace, Vector DBs, Prompt Engineering, MCP
Cloud	AWS (AI Services), Docker, Firebase, Gemini API, Claude API, RESTful APIs
Languages	Python, C/C++, Java, JavaScript (Node.js, React), SQL, Git

Professional Experience

Swift Solutions

Feb 2026 - Apr 2026

AI Trainer and Business Developer (Remote)

- Improved AI code reliability by performing RLHF on automated OS navigation tasks and expanded project lead conversions by 15% through engineered LLM prompting workflows.

Appen (CrowdGen)

2025 - Present

AI Data Annotator

- Labeled and transcribed complex audio recordings to build high-fidelity datasets, directly supporting the training, evaluation, and optimization of machine learning models.

Certifications & Achievements

- **AI & Software Engineering:** Ranked #1 in Pakistan on HackerRank AI Leaderboard | HackerRank Software Engineer Cert | AWS AI Practitioner (Spec: GenAI & Model Optimization) | Google AI Professional | AI Engineering: Agents (W&B).
- **Cybersecurity & AI Governance:** IT Security (Google) | AWS Security, Compliance & Governance for AI | Cybersecurity AI (OHSC) | API Security Fundamentals '25.
- **Systems & Networking:** Linux 100: Fundamentals (TCM) | Intro to CIP (OPSWAT) | Networking Basics (Cisco) | EF SET English: C2 Proficient.
